

VNG testing has been considered the “gold standard” for vestibular testing and is currently being performed by many prestigious medical practices across the nation. Resources are available to contact for discussion of programs from a research, clinical, business and revenue perspective.

The VNG test is conducted by a trained and proficient technician, takes approximately 40 minutes to conduct, and a full narrative report can be generated (utilizing Interpra™) which includes impressions and recommendations.

Recently, researchers have determined that VNG equipment can be utilized for early stroke detection as well as CONCUSSION DETECTION.

The VNG test is conducted by a trained and proficient technician, takes approximately 40 minutes to conduct, and a full narrative report can be generated (utilizing Interpra™) which includes impressions and recommendations.

The new compact lightweight Goggle Assembly is used for spontaneous, positional, Hallpike, and rotational testing and for monitoring nystagmus during canalith repositioning. The patient is in complete darkness, providing a non-fixating environment with the eyes open. The Leaders of Videonystagmography have done it again... The fastest testing software package available for VNG!

MedTrak has also developed the industry’s first mobile VNG system called the Mobi-Trak. The MobiTrak System includes the same best in class technology, but in a compact and mobile package. No program on the market today can match the Technology and the Support that MedTrak provides. So act now and bring Balance back into your patient’s lives.

Optional Travel case

## TRAINING AND SUPPORT

### MedTrak VNG

World-Class Service. With the purchase of the MedTrak VNG your practice will also receive:

- Onsite Installation and Training.
- Introductory Data Analysis.
- Ongoing Support for Technicians and Physicians.

## EXAMPLE REIMBURSEMENT
